

CENTURY has qualified personnel who have expertise in a range of boiler making and welding disciplines. We have the ability to simultaneously manufacture one off projects and various jobbing related tasks such as:

- Communication Towers
- Structures for substations
- Materials handling equipment
- Robotically welded high volume automotive components

The robotic welders feature power wave technology to comply with Australian Design Rule standards within the automotive industry.

Our fabrication shop covers an area of approximately 2000 square metres, with room to extend if required. The fabrication area is serviced by overhead cranes and equipped with a range of CNC equipment for cutting and brake pressing functions.

Adjacent to the fabrication shop is an onsite painting facility and a large storage area for holding customer stock and completed orders.
